Depistaj tande tibebe ki fèk fèt

Newborn Hearing Screening

Tests done for babies

Your baby is checked for hearing loss because it can impact speech and language development. There are 2 tests that may be done to check your baby's hearing. Each test is safe and has no risk to your baby. These tests are accurate to identify hearing loss in babies.

Your baby may have 1 or both tests.

- **OAE (otoacoustic emissions):**

  Sound is played into baby's ear and the echo reflected back is picked up by a small microphone. If baby hears normally, there will be an echo measured.
- **ABAER (auditory brainstem response):** Sounds are played into baby's ears. Small sticky patches, called electrodes, are placed on baby's head to pick up brain waves in response to the sounds.

Your baby's results

OAE test:

Right ear: ❑Pass ❑Non-pass

Left ear: ❑Pass ❑Non-pass

ABAER test:

Right ear: ❑Pass ❑Non-pass

Left ear: ❑Pass ❑Non-pass

If your baby passed, know that this does not mean your baby may not develop a hearing problem later.

Tès yo te fè pou tibebe

Yo egzamine tibebe w la pou pèt tande paske sa kapab afekte devlopman lapawòl ak langaj. Yo ka fè 2 tès pou egzamine tande tibebe w la. Chak tès yo san danje epi yo pa genyen okenn risk pou tibebe w la. Tès sa yo kapab idantifye avèk presizyon pèt tande tibebe.

Tibebe w la ka fè 1 oswa toude tès yo.

- **Emisyon Otoakoustik (OAE):**

  Son an jwe nan zòrèy tibebe a epi yon ti mikwofòn pran eko ki retounen an. Si tibebe a tande nòmalman, ti mikwofòn nan ap mezire eko a.
- **Repons oditif nan sèvo (ABAER):** Son yo jwe nan zòrèy tibebe a. Yo mete sou tèt tibebe a kèk ti plak kolan, yo rele yo elektwòd, pou detekte ond nan sèvo a an repons ak son an.

Rezilta tibebe w la

Tès OAE:

Zòrèy dwat: ❑Pase ❑Pa pase

Zòrèy goch: ❑Pase ❑Pa pase

Tès ABAER:

Zòrèy dwat: ❑Pase ❑Pa pase

Zòrèy goch: ❑Pase ❑Pa pase

Si tibebe w la te pase tès la, konnen sa pa vle di li pa ka devlope yon pwoblèm tande alavni.

If your baby does not pass in both ears, he or she will be referred for more testing. It does not mean that your baby has hearing loss, but your baby needs to be checked in a few weeks to test his or her hearing again. Be sure you keep this appointment.

Si tibebe w la pa pase tès la nan toude zòrèy yo, y ap refere li pou plis tès. Sa pa vle di tibebe w la gen pèt tande, men yo ta dwe egzamine tibebe w la nan kèk semèn pou teste tande li ankò. Asire w ou kenbe randevou sa a.

Speech and language

Hearing can change as a baby grows, so it is important to monitor your baby's speech, language, and communication.

If you have concerns about your baby and you think there may be a problem with his or her hearing or speech, talk to your baby's doctor or audiologist.

Lapawòl ak langaj

Tande tibebe a ka chanje pandan li ap grandi, Se poutèt sa li enpòtan pou kontwole lapawòl, langaj ak kominikasyon tibebe w la.

Si w gen enkyetid konsènan tibebe w la epi w panse ta ka gen yon pwoblèm nan tande oswa nan lapawòl li, pale ak doktè oswa odyològ tibebe w la.

If you have questions

Please call **Newborn Hearing Screening at 614-293-3028** if you have questions, need help, or if you would like more information.

Si ou gen kesyon

Tanpri rele **Depistaj tande tibebe ki fèk fèt (Newborn Hearing Screening) nan 614-293-3028** si ou gen kesyon, bezwen èd, oswa si ou ta renmen jwenn plis enfòmasyon.
