

Baaritaanka COVID-19 ee Dhamaan Bukaanaada Isbitaalka

COVID-19 Testing of All Hospital Patients

To protect our patients and staff, all patients will be placed in isolation and tested for COVID-19. This testing will allow us to reduce the risk of the virus spreading to other patients or staff by finding any patient who may have the virus, whether they have any signs or not.

For certain patients who have pre-planned hospital admissions, the testing may be done before coming into the hospital.

Having the test

- Your nurse or another staff member will wear a gown, face mask, eye protection and gloves to do this test. You will be seated or in bed with the head of the bed raised up and your head tilted back.

Si loo ilaaliyo bukaannadeenna iyo shaqaalaheena, dhamaan bukaannada waxaa la gelin doonaa karantiil waxaana laga baari doonaa COVID-19. Baaritaankani waxa uu noo oggolaan doonaa inaan yareyno khatarta fayraska ee ku faafi kara bukaannada kale ama shaqaalaha annagoo raadineyna bukaan kasta oo laga yaabo inuu qabo fayraska, ha qabaan astaamo ama yaysan lahaan.

Bukaanada qaar ee horay u qorsheeyay gelitaanka issbitaalka, baaritaanka waa la sameyn karaa ka hor intaysan isbitaalka soo gelin.

Sameynta baaritaanka

- Kalkaalisadaada caafimaad ama xubin kale oo shaqaale ka mid ah ayaa xiran doona dharka isbitaalka, maaskarada wajiga, qalabka lagu ilaaliyo indhaha iyo galoofis si ay u sameeyaan baaritaankan. Waa lagu fadhiisin doonaa ama lagugu seexin doonaa sariirta iyadoo madaxa sariirta kor loo qaadayo madaxaagana dib loo janjeerinayo.

THE OHIO STATE UNIVERSITY

WEXNER MEDICAL CENTER

wexnermedical.osu.edu

- A long flexible swab is put into one side of your nose to the back of your throat and moved around to collect a sample for about 15 seconds. It can feel uncomfortable and may cause your eyes to water.
- The swab is removed and then put into the other side of your nose and moved around to add to the sample for another 10 to 15 seconds, then removed.
- The swab is put into a tube and sent to the lab for testing. Results may take up to 72 hours to come back.

If you are not able to have the test done this way because of health concerns or other issues, another type of COVID test will be done. It may take longer to get results back.

Isolation

You will be expected to stay in your hospital room with the door closed. Staff will be wearing gowns, gloves and masks and eye protection when they need to come into your room to provide care.

- If your test results come back negative for the virus, the isolation precautions will be stopped.
- If your test results come back positive for the virus, you will remain in isolation. Your doctor and care team will provide treatment based on any signs of the virus and your condition.

- Tuubada baaritaanka ee dheer oona jilicsan ayaa la galinaa hal dhinac oo sankaa ah xagga dambe ee hunguri-mareen kaaga oo lagu wareejin doonaa halkaas si looga qaado muunad qiyaas ahaan illaa 15 ilbiriqsi. Waxay ku keeni kartaa raaxo daro waxayna u horseedi kartaa indhahaaga inay biyo ka imaadaan.
- Tuubada ayaa laga soo saarayaa sankaa ka dibna la gelinayaa dhinaca kale ee sankaa oo lagu wareejinayaa si muunada wax loogu daro 10 illaa 15 ilbiriqsi oo kale, ka dibna waa laga soo saaraa.
- Tuubada yar waxaa la gelinayaa tuubo kale waxaana loo diraa sheybaarka si loo baaro. Natiijooyinka waxay qaadan karaan illaa 72 saacadood si ay u soo baxaan.

Haddii aadan awoodin inaad u sameyso baaritaanka qaabkaan sababo la xiriira haddii aad qabto cilado caafimaad ama arrimo kale, nooc kale oo ah baaritaanka COVID ayaa la sameyn doonaa. Waxay qaadan kartaa waqti dheer si natiijada dib loogu helo.

Karantiil/go'domin

Waxaa lagaa filayaa inaad joogto qolkaaga isbitaalka iyadoo albaabku xiran yahay. Shaqaaluhu waxay xirnaan doonaan dharka isbitaalka, galoofisyo iyo maaskaro iyo qalabka ilaalinta indhaha markay u baahdaan inay soo galaan qolkaaga si ay daryeel kuu siiyaan.

- Haddii natiijooyinka baaritaankaagu soo baxaan oo lagaa waayo fayraska, taxadarada karantiilka ayaa la joojin doonaa.
- Haddii natiijooyinka baaritaankaagu soo baxaan oo lagaa helo fayraska, waxaad ku sii jiri doontaa karantiilka. Dhakhtarkaaga iyo kooxda daryeelka ayaa ku siin doona daaweyn ku saleysan astaamaha fayraska iyo xaaladaada.

- If you refuse to have testing, you will remain in isolation for the time that you are in the hospital.

Talk to your doctor or others on your care team if you have any questions.

- Haddii aad diido in aad qaadato baaritaanka, waxaad ku jiri doontaa karantiil wakhtiga aad ku jirtid isbitaalka.

La hadal dhaqtarkaaga ama xubnaha kooxda daryeelka caafimaadkaaga haddii aad qabtid wax su'aalo ah.

La hadal dhaqtarkaaga ama kooxda daryeelka caafimaadka haddii aad qabtid wax su'aalo ah oo ku saabsan daryeelkaaga.

Talk to your doctor or health care team if you have any questions about your care.
